

Technology rubric - mattermost

- ^{DEMO} should be presented on main (everything that's stable)
- merge things that pass the pipeline: specify if smth should not work (in development)
 - ↳ check checkstyle
- Technology rubric graded this week
- end of every week (before meeting) merge main friday this week → wait for "updates"
- features to prioritise:
 - multi-board (Daniel started)
 - card description (Mate)
 - tags

multi-board: if something isn't clear →
→ we decide

H. evaluation

- draft until friday
- ask friends about team colab.
- arrange a meeting between the teams (this week)
- read about evaluation
- do a wireframe (ex. Figma)

- decide how card details will appear (pop-up)
- use wireframe only as guidance
- deadline: report draft
- check template on github (by lecturer)
- start writing decent text → restructure after
- **check grading** (course website)
 - ↳ read everything

→ improve quality over quantity of format.
